

Transparent Plastic Plate Characteristics

Characteristics of PET, Antistatic PVC, Acrylic and Polycarbonate

Provides four types of clear plates with superior transparency. In addition to the standard grade, antistatic grade with antistatic function is available. 4 colors, transparent, smoke brown, smoke gray and orange, are available.

• PET

It has approx. 4 times stronger impact resistance than that of acrylic. Moreover it is an environment-friendly material, which generates no poisonous gas when burned. It is also cost effective.

• Antistatic PVC

Excels in chemical resistance and flame resistance, and superior in cost-effectiveness among anti-static materials.

• Acrylic

Excels in transparency, weather resistance and machinability, and is used widely for indoor and outdoor purposes, such as covers for industrial machinery, art display cases and signboards.

• Polycarbonate

The level of impact strength is ranked as the highest among the transparent resin materials (approx. 30 times higher than that of acrylic plates). It excels in resistance against high and low temperatures, and is widely used.

* Values of elongation of polycarbonate and PET are % values measured by JIS K-7162-1B/50.

Characteristics of Acrylic Cast Plates and Extruded Plates

As for Acrylic Plates, cast plates made by cell-cast method and extruded plates are available.

Cast plates have better heat resistance and stronger mechanical strength than extruded plates.

Extruded plates are more inexpensive than cast plates.

When extruded plates have contact with vaporizing liquid such as methanol and methylene chloride after they are thermal-processed such as laser machining, they may have cracks. Also, extruded plates may have deflection at high temperature.

Transparent Plastic Plates

MISUMI provides clear plate of four materials superior in transparency. In addition to the standard grade, antistatic grade with antistatic function is available. 4 colors, transparent, smoke brown, smoke gray and orange, are available. Often used as a cover, and variety of options for mounting hole alterations are available. Use MISUMI Transparent Plastic Plates.

	Single Joint Kit Standard Type	Single Joint Kit Standard Type	Single Joint Kits Narrow Type, Screw Joint Kits	Standard Type	Eccentric Nut Type		
(Ex. 1)							
(Ex. 2)							
	For Ex. 2, panel notching is not required.		☞ The figure above shows Single Joint Kit Narrow Type.				
HFS5 Series 5							
HFS6 Series 6							
HFS8 Series 8							
HFS9-45 Series 845							

☞ For how to select panels, refer to P.803, 804.

☞ Dimensions above include a margin of 1mm at the groove part.

Make the margin larger for engineered plastic plates and etc., because it expands or shrinks largely by the temperature fluctuation.

Ex.) When the temperature rises or falls by 10°C, the Acrylic Plate Economy Type (Extruded) with 1m length expands or shrinks by 0.7mm. The margin of approx. 2mm is necessary in the case of temperature difference of 30°C.
